

HAFIZ BAHTIAR

Backend & Flutter Developer

Kuala Lumpur, Malaysia | hafiz@hafizbahtiar.com | hafizbahtiar.com | github.com/hafizbahtiar | linkedin.com/in/hafizbahtiar

PROFESSIONAL SUMMARY

Backend & Flutter developer with 6+ years shipping production software across government, payments, and security operations. I build reliable APIs on Node.js, Hono and Cloudflare Workers, and mobile apps in Flutter and native Android. Most recently the primary developer on seven production mobile apps at once, covering clean-architecture rewrites, offline-first data, payment terminal integration, security hardening, and automated testing.

EXPERIENCE

Mid Mobile Developer

Sept 2026 - Present

Access Jewel Sdn Bhd - Kuala Lumpur, Malaysia (group transfer from Laureate System Solution)

Flutter, Dart, Riverpod, GoRouter, Drift, Android (Java), Google Maps API, Google ML Kit

- Continue as the main developer on the same 7 production apps, five in Flutter and two in native Android.
- Rewrote a licensing field app from scratch on a cleaner architecture, with offline drafts so officers can keep working without a connection.
- Built background location tracking with offline sync for a parking enforcement app, so supervisors see each officer's route through dead zones.
- Built a new wallet top-up flow for a public parking app and tightened up its release builds.

Mobile Developer

Aug 2024 - Aug 2026

Laureate System Solution Sdn Bhd - Kuala Lumpur, Malaysia

Flutter, Dart, Riverpod, Provider, Android (Java), Sunmi POS, OneSignal, Laravel, PostgreSQL

- Built most of a government procurement app, taking it from an early prototype to 23 modules in production.
- Took over 6 additional apps previously worked on by 3 developers, becoming primary developer on 7 production apps concurrently from Jun 2026.
- Added QR licence scanning that fills in census forms automatically, plus upload and submission retries for poor connections. Together with the team, this helped officers go from about 40 to 60 census visits a day.
- Added automated tests to the census app, which had almost none, and set up separate dev, staging and production builds.
- Audited every app in the portfolio for security issues and fixed the critical ones, such as moving session tokens into secure storage and removing signing keys from repositories.
- Extended a Java payment terminal app on Sunmi POS with recovery for stuck card transactions, audit-roll printing, and support for more terminal models.
- Shipped the Android 16 (targetSdk 36) migration for a public parking wallet app on Google Play and AppGallery.

Programmer

Dec 2022 - Jul 2024

Securiforce Sdn Bhd - Kuala Lumpur, Malaysia

Codelgniter 3 and 4, PostgreSQL, Kotlin, Java, .NET, Docker

- Built three web systems for cash-in-transit operations on Codelgniter and PostgreSQL, each with a Kotlin companion app. They covered a digital receipt book, secure lock-code delivery, and a client ordering portal.
- Moved the team off paper receipt books and phone calls to the command center, so every transaction could be tracked and audited.
- Ran user acceptance testing and trained end users before each rollout.
- Handled application support within the agreed SLAs, fixing issues reported by users and writing the fixes down for the team.

Software Engineer

Sept 2020 - Nov 2022

Jom Dapur Sdn Bhd - Kuala Lumpur, Malaysia

React Native, React, Node.js, Express.js, MongoDB

- Built the customer food delivery app in React Native and its Node.js backend on MongoDB, with live order tracking and Stripe payments.

- Built the rider app in React Native, with live order assignment, GPS navigation, earnings tracking, and push notifications.
- Built the admin dashboard in React, showing live operations and financial reports with role-based access.

SELECTED PROJECTS

ILMS / CLS - Licensing Field Operations Work - Laureate / Access Jewel
Flutter app for licensing officers to run premise census, billboard census and investigations in the field, often without a stable connection. Led a ground-up rewrite on clean architecture with offline drafts.

ePerolehan DBKL - Government Procurement Work - Laureate / Access Jewel
Live procurement platform for Kuala Lumpur City Hall letting registered vendors browse and purchase tenders and track project progress. Work on the Flutter mobile app and Laravel services.

DBKL EzPay - Payment Terminal App Work - Laureate / Access Jewel
Android app on Sunmi POS terminals at DBKL counters. It takes compound, licence and cash payments, routes card transactions to the bank terminal, and prints the receipt.

EZ KL Smart Park - DBKL Parking Wallet Work - Laureate / Access Jewel
Public parking wallet app on Google Play and AppGallery for hourly parking, season passes and permits. Shipped the Android 16 migration, a new top-up checkout, and stricter permit-form validation.

Capital Park Patrol - Parking Enforcement Work - Laureate / Access Jewel
Flutter app for enforcement officers to scan plates with on-device text recognition and a live location map.

DAMS - Door Access Management Work - Laureate / Access Jewel
Flutter app for staff QR credentials, live door camera feeds, biometric door unlock, and visitor invitations.

Invois - Offline-First Invoice App Personal
Offline-first Flutter invoicing app with ObjectBox storage, client management and PDF export, published on Google Play.

CIT Receipt Book - Audit-Ready Operations Work - Securiforce
Web system that replaced paper cash-in-transit receipt books, with a Kotlin companion app for the field.

Wetrack - Secure Code Automation Work - Securiforce
Delivers and tracks secure lock codes across cash centers and ATM branches, replacing phone calls to the command center.

Fasttrack - Client Ordering Portal Work - Securiforce
Portal for corporate clients to book cash-in-transit services online.

SKILLS

Mobile: Flutter, Dart, Android (Java, Kotlin), React Native	Integrations: Google Maps, Google ML Kit, OneSignal, biometrics, Sunmi POS, Stripe
Flutter Stack: Riverpod, Provider, GoRouter, Drift, Dio, offline-first architecture	Security & Quality: security auditing, secure storage, ProGuard / R8, unit and widget testing
Backend: Node.js, Bun, Hono, Express.js, Laravel, CodeIgniter, .NET	Infrastructure: Cloudflare Workers, Docker, Linux, Caddy, nginx, GitHub Actions, Git
Languages: TypeScript, JavaScript, Dart, Java, Kotlin, PHP	AI Tooling: Claude, Codex, Ollama
Databases: PostgreSQL, MongoDB, SQLite / Cloudflare D1, Redis	

EDUCATION

Diploma in Mechanical Engineering - Universiti Tun Hussein Onn Malaysia (UTHM) Aug 2016 - Feb 2019

LANGUAGES

Bahasa Melayu - Native | English - Limited Proficiency
